Member of competence network OT

Date / Signature

Venue:

Haus der Kulturen Braunschweig e.V.
Am Nordbahnhof 1
38106 Braunschweig

PARTICIPATION FEE (incl. evening event, plus tax 19%):

260,00 € per person
210,00 € per person for Member of competence network OT
150,00 € per student

Silicon & Diamond photonics

[08.03.2016] Silicon photonics

Silicon is the material of choice for the microelectronics industry. However, recent developments of the engineering of the optical properties of silicon have made it a very interesting material for optical signal processing. Additionally, Silicon photonics is CMOS compatible which enables the possibility to exploit the mature technology of the microelectronics industry and to co-integrate optical and microelectronics processing. Thus, silicon integrated photonics could pave the way to very high-data rate and cheap optical transmitter and receiver modules for the mass market of the internet, data centers and even for chip-to-chip and on-chip communications. At the same time, the confinement of the waves and the mix with other materials have led to very interesting properties which enable integrated frequency combs, optical signal processing, strong reduction of the interaction length and a lot of other very new applications. We have assembled a fantastic programme of speakers who will give an overview and an insight into this very exciting field of research.

[09.03.2016] Diamond Nanophotonics

Diamond – is this the material of the next decades? It possesses remarkable physical and chemical properties, high mechanical hardness, large Young's module and high thermal conductivity. But now it enters also the quantum optics' stage! Diamond is transparent from the ultraviolet to the infrared spectral range, has a high refractive index and it may contain a variety of defect centers. These properties make diamond a very interesting material for many applications, especially exciting is the field of quantum information and quantum optics. In the center of these modern applications are color centers, mainly nitrogen-vacancy and silicon-vacancy single centers suitable for single photon operation and manipulation.

In this workshop, top level presentations will be given on the fields of diamond wafer production, quantum optics in diamond, diamond nanostructures, diamond and metrology, integration of defect centers in diamond, light and matter interactions and the interfacing of color centers in diamond.

Silicon & Diamond photonics

[Brunswick, March 08th & 09th 2016]

Brunswick, 08. – 09. March 2016

[08.03.2016] Silicon photonics

Welcome 10:00 hrs

Thomas Fahlbusch, PhotonicNet GmbH
Thomas Schneider
Institut für Hochfrequenztechnik, TU-Braunschweig

Silicon-Organic Hybrid -- a New Platform for Communications 10:15 hrs

Juerg Leuthold
Institute of Electromagnetic Fields, ETH-Zürich, Switzerland

Silicon-organic hybrid (SOH) integration and multi-chip systems: Extending the capabilities of the silicon photonic platform 10:45 hrs

Wolfgang Freude
Karlsruher Institut für Technologie (KIT), Karlsruhe

Coffee break 11:15 hrs

Hybrid Chalcogenide-on-Silicon Photonic Devices 11:45 hrs

Avi Zadok
Bar-Ilan University , Ramat Gan, Israel

Surface Brillouin scattering in optical microwires 12:15 hrs

Thibaut Sylvestre
Femto-ST SCIENCES & TECHNOLOGIES
Besancon, France

Lunch break 12:45 hrs

Silicon Photonics Integrated Circuits 13:45 hrs

Stefan Meister
Institut für Optik und Atomare Physik, TU-Berlin

Optical OFDM Demultiplexer in Silicon Photonics 14:15 hrs

Christian Schaeffer
Helmut Schmidt Universität, Hamburg

Coffee break 14:45 hrs

Integrated optics using low-loss Si₃N₄ glass waveguides 15:15 hrs

Klaus-J. Boller
University of Twente, Enschede

"Silicon-on-Insulator integrated Nyquist pulse Transmitter" and Closing Remarks 15:45 hrs

Thomas Schneider
Institut für Hochfrequenztechnik, TU-Braunschweig

End of presentations on the first day 16:15 hrs

Evening event 19:00 hrs

Get Together Dinner at Gastwerk, Brunswick

During a collective dinner there is the opportunity for a meet and greet.

[09.03.2016] Diamond Nanophotonics

Performance Tradeoffs in reverse biased Silicon Modulators 09:30 hrs

Kambiz Jamshidi
Institut für Nachrichtentechnik, TU-Dresden

Diamond Photonics: Interfacing color centers in diamond 10:00 hrs

Christoph Becher
Universität des Saarlandes, Saarbrücken

Coffee break 10:30 hrs

Scanning Probe imaging with color centers in diamond nanostructures 11:00 hrs

Elke Neu
Universität des Saarlandes

Synthesis of single crystal diamond wafers as base material for photonic applications 11:30 hrs

Matthias Schreck
Universität Augsburg

Lunch break 12:00 hrs

Efficient collection of photons from solid-state single-photon emitters 13:00 hrs

Stephan Götzinger
FA Universität Erlangen

Single-photon sources based on impurity doped nanodiamond for metrological applications 13:30 hrs

Stefan Kück
Physikalisch-Technische Bundesanstalt Braunschweig

Coffee break 14:00 hrs

Challenges for an Integrated Quantum Optical Technology Based on Defect Centers in Diamond 14:30 hrs

Oliver Benson
Humboldt-Universität zu Berlin

Wrap up 15:00 hrs
